SPRINGER INTERNATIONAL

Theoretica Chimica Acta

A Journal for
Structure, Dynamics and Radiation

Founded and edited in 1962 by H. Hartmann from Vol. 1 (1962) to Vol. 66 (1984).
As of Vol. 67 (1985) edited by K. Ruedenberg et al.

Copyright
Submission of a manuscript implies: that the work described has not been published before (except in the form of an abstract or as part of a published lecture, review, or thesis); that it is not under consideration for publication elsewhere; that its publication has been approved by all coauthors, if any, as well as by the responsible authorities at the institute where the work has been carried out; that, if and when the manuscript is accepted for publication, the authors agree to automatic transfer of the copyright to the (publisher, society); and that the manuscript will not be published elsewhere in any language without the consent of the copyright holders.
All articles published in this journal are protected by copyright, which covers the exclusive rights to reproduce and distribute the article (e.g., as offprints), as well as all translation rights. No material published in this journal may be reproduced photographically or stored on microfilm, in electronic data bases, video disks, etc., without first obtaining written permission from the publisher.
The use of general descriptive names, trade names, trademarks, etc., in this publication, even if not specifically identified, does not imply that these names are not protected by the relevant laws and regulations.
While the advice and information in this journal is believed to be true and accurate at the date of its going to press, neither the authors, the editors, nor the publisher can accept any legal responsibility for any errors or omissions that may be made. The publisher makes no warranty, express or implied, with respect to the material contained herein.

Special regulations for photocopies in the USA

Photocopies may be made for personal or in-house use beyond the limitations stipulated under Section 107 or 108 of U.S. Copyright Law, provided a fee is paid. This fee is US $ 0.20 per page, or a minimum of US $ 1.00 if an article contains fewer than five pages. All fees should be paid to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA, stating the ISSN 0040-5744, the volume, and the first and last page numbers of each article copied. The copyright owner's consent does not include copying for general distribution, promotion, new works, or resale. In these cases, specific written permission must first be obtained from the publisher.

Contents

Acevedo R, Diaz G, Vasquez SO, Flint CD: Vibronic intensities in the electronic spectra of transition metal complex ions VIII: Vibrational coordinates for octahedral ions and their application to the $^4A_{2g} \leftrightarrow {}^2E_g$ transition of the MnF_6^{2-} ion 349

Aguilar A, Gimenez X, Lucas JM, Gervasi O, Laganà A: Li + HCI RIOSA cross section calculations on parallel computers 191

Almlöf J → Häser M

Almlöf J → Wahlgren U

Amestoy PR, Daydé MJ, Duff, IS: Designing portable parallel software for linear algebra 169

Amos RD → Bearpark MJ

Aquilanti V, Cavalli S, Grossi G: Discrete analogs of spherical harmonics and their use in quantum mechanics: The hyperquantization algorithm 283

Aquino AJA → Ornellas FR

Babic D, Graovac A, Gutman I: On a resonance energy model based on expansion in terms of acyclic moments: Exact results 403

Baerends EJ → Buijse MA

Baláž V → Kvasnička V

Balint-Kurti GG → Marston CC

Baraglia R → Laganà A

Bauschlicher CW, Jr., Langhoff SR: Computation of electronic transition moments: the length versus the velocity representation 93

Bearpark MJ, Handy NC, Amos RD, Maslen PE: Some investigations of the MP2-R12 method 361

Bowman JM, Gazdy B: A truncation/recoupling method for eigenvalues and eigenvectors ideal for parallel computation 215

Buijse MA, Baerends EJ: Orbital localization in transition metal molecules 389

Carter M → Hoffman DK

Cavalli S → Aquilanti V

Chasman D, Silbey RJ, Eisenberg M: Massively parallel high-energy time-dependent wavepacket calculations 175

Cuccaro SA → Mark Wu Y-S

Darakjian Z → Hayes EF

Daydé MJ → Amestoy PR

Dehareng D, Dive G, Ghuysen JM: Polarization correction to the electrostatic potential at the CNDO and the *ab initio* level. Influence of the basis set expansion 141

Diaz G → Acevedo R

Dive G → Dehareng D

Dixon RN → Marston CC

Duff IS → Amestoy PR

Eisenberg M → Chasman D

Feyereisen MW → Häser M

Flint CD → Acevedo R

Garcia E → Laganà A

Gazdy B → Bowman JM

Gervasi O → Aguilar A

Gervasi O → Laganà A

Ghuysen JM → Dehareng D

Gimenez X → Aguilar A

Graovac A → Babic D

Grossi G → Aquilanti V

Gustafson J → Hoffman DK

Gutman I → Babic D

Häser M, Almlöf J, Feyereisen MW: Exploiting non-abelian point group symmetry in direct two-electron integral transformations 115

Handy NC → Bearpark MJ

Harary F, Mezey PG: Similarity and complexity of the shapes of square-cell configurations 379

Harrison RJ, Kendall RA: A parallel version of ARGOS: A distributed memory model for shared memory UNIX computers 337

Hayes EF, Darakjian Z, Walker RB: Benchmark studies of the BCRLM reactive scattering code: Implications for accurate quantum calculations 199

Hipes PG → Mark Wu Y-S

Hoffman DK, Sharafeddin OA, Kouri DJ, Carter M, Nayar N, Gustafson J: On the role of parallel architecture supercomputers in time-dependent approaches to quantum scattering 297

Janssen CL, Schaefer III HF: The automated solution of second quantization equations with applications to the coupled cluster approach 1

Kendall RA → Harrison RJ

Kouri DJ → Hoffman DK

Kuppermann A → Mark Wu Y-S

Kvasnička V, Pospichal J, Baláž V: Reaction and chemical distances and reaction graphs 65

Laforenza D: Parallel computer architectures: state of the art and trends 155
Laforenza D → Laganà A
Laganà A: Preface 153
Laganà A → Aguilar A
Laganà A, Garcia E, Gervasi O, Baraglia R, Laforenza D, Perego R: $\hat{D} + \hat{D}_2$ Quasiclassical rate constant calculations on parallel computers 323
Langhoff SR → Bauschlicher CW Jr
Launay JM: Computation of cross sections for the $F + H_2(v = 0, j = 0) \rightarrow FH(v'j') + H$ reaction by the hyperspherical method 183
Lin H-L: The evaluation of matrix elements for non-canonical Weyl tableau basis states adapted to $U(n_1 + n_2) \supset U(n_1) \times U(n_2)$. I. Explicit formulae for subduction coefficients 43
Lin H-L: The evaluation of matrix elements for non-canonical Weyl tableau basis states adapted to $U(n_1 + n_2) \supset U(n_1) \times U(n_2)$. II. Explicit formulae for the matrix elements 53
Linderberg J: Propagation in hyperspherical coordinates 271
Lucas JM → Aguilar A
